Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-31 are rejected under 35 U.S.C. 102(b) as being anticipated by Burkhart et al. (US Patent 5,681,333) hereafter Burkhart. Burkhart discloses a device for suture anchor insertion comprising a hollow guide sleeve (elongated body 6) through which a suture guide can be passed and wherein the distal end of the guide sleeve has a front annular face (16/18), where there is a single point that is fixed relative to the front annular face (see adjacent point in Fig. 1), and wherein a shoulder is formed (18) in a cross section plane between the distally projecting point and the remainder of the front annular face and wherein this shoulder is considered substantially perpendicular to a longitudinal axis of the guide sleeve. Because the tube is cannulated, the tip would extend over a circumferential area with an arced shape. Additionally the shape of the end would allow the insertion tool to conform and be better placed against the bone surface or tissue to be anchored upon. Burkhart also disclose what may function as an anchor rotator (28) and which may correspond to a clear (cutaway section, 6) of the elongated insertion apparatus.

Response to Arguments

Applicant's arguments, see arguments, filed 6 MAY 2009, with respect to the rejection(s) of claim(s) 1-31 have been fully considered and are persuasive. Applicant has pointed out specific limitations in the foreign reference and these considerations are found to be persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Burkhart. The rejections on the merits are found above.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
